

Battery-free Measurement System

Digital scales are faster, more precise, and more accurate compared to traditional scales, but they have a major weakness: the need for power, which can be frustrating especially in outdoor applications such as agriculture!

Charder's new innovative battery-free solution solves this problem by powering the scale platform using a smartphone or tablet via Type-C USB cable!

What's more, measurement results are displayed and saved directly in the app itself, significantly streamlining recordkeeping and reducing error rates!

Features

No more manual recordkeeping

- Save time via automated data recording
- Reduce error rate and disputes

No more batteries

- Designed for places with less access to mains power
- Reduce labor costs by removing need to repeatedly check and replace batteries
